

MICRO HG-HK

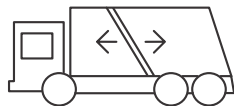

THE COMPLETE ONE

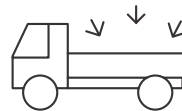

ADVANTAGES

Suitable for
lightweight front-wheel
drive chassis

Compaction unit
driven by a
roofmounted shield

Designed for multi
equipment carriers

Variable body
concept for heights,
lengths & widths

ABOUT THE MICRO HG-HK

This versatile refuse compaction body with a usable volume of 3 to 7 m³ offers the possibility of disposing of large refuse containers with small vehicles thanks to its conceptual design. It also offers a high degree of flexibility for seasonal utilisation of the chassis

thanks to the possibility of interchangeable use on hookloaders or on supports with castors. The body can be filled manually on both sides via the side loading doors, or alternatively with the standard rear installed hydraulic chute. Emptying takes place at the rear using tipper

hydraulics. Ideally suited for narrow paths, tight bends and limited clearance heights.

SERIES OPTIONS

BASIC CONSTRUCTION:

- Rear loading
- Rear-mounted lifter unit
- Storage tray for loose loads
- DIN folding arms and holder for special containers

AREAS OF APPLICATION

BASKETS

**CONTAINER
REMOVAL MGB
